Exercise 1 (Doubly-Connected Edge List)

a) Which of the following equations are always true?.

$$\mathrm{Twin}(\mathrm{Twin}(\vec{e})) = \vec{e} \tag{1}$$

$$\mathrm{Next}(\mathrm{Prev}(\vec{e})) = \vec{e} \tag{2}$$

$$\mathrm{Twin}(\mathrm{Prev}(\mathrm{Twin}(\vec{e}))) = \mathrm{Next}(\vec{e}) \tag{3}$$

$$\mathrm{IncidentFace}(\vec{e}) = \mathrm{IncidentFace}(\mathrm{Next}(\vec{e})) \tag{4}$$

(1) True. See definition of Twin.

(2) True. See definitions of Prev and Next.

(3) False. Consider figure 1 as counterexample, with $\vec{e} := \vec{e}_{2,2}$.

$$\begin{aligned}
&\mathrm{Twin}(\mathrm{Prev}(\mathrm{Twin}(\vec{e}))) \\
=&\mathrm{Twin}(\mathrm{Prev}(\mathrm{Twin}(\vec{e}_{2,2}))) \\
=&\mathrm{Twin}(\mathrm{Prev}(\vec{e}_{2,1})) \\
=&\mathrm{Twin}(\vec{e}_{4,2}) \\
=&\vec{e}_{4,1} \\
\neq&\vec{e}_{3,1} \\
=&\mathrm{Next}(\vec{e}_{2,2})
\end{aligned}$$

(4) True. See defintion of IncidentFace.

Figure 1: An example of a doubly-connected edge list for a simple subdivision. Figure is taken from [1].

b) Give an example of a doubly-connected edge list where for an edge $\vec{e}$ the faces IncidentFace($\vec{e}$) and IncidentFace(Twin($\vec{e}$)) are the same.

b) Given a doubly-connected edge list representation for a subdivision where

$$\text{Twin}(\vec{e}) = \text{Next}(\vec{e})$$

holds for every half-edge $\vec{e}$. How many faces can the subdivision have at most?
